

DATASHEET Thermal Protector C06

Type series 06

Construction and function

Switchgear consisting of a mobile and circular contact bridge (1), a contact bearing pin (2), a spring snap-in disc (3) and a bimetallic disc (4) which is riveted into one another, undetachable and fixed in a positive lock and self-aligning between a non-conductive floor of a housing (5) and an insulating ceramic bearing (6) with two integrated stationary contacts (7) as electrodes. At the same time, the switchgear is supported by the spring snap-in disc (3) with the contact bridge (1) acting as a transfer element for electric current which is held between a supporting collar and a circumferential ring. As such, the bimetallic disc (4) underlying it, that is also stuck out from the contact bearing pin (2), can continuously work (exposed) by mechanical loads without the contact pressure defined by the spring snap-in disc (3) diminishing. As soon as the bimetallic disc (4) reaches its rated switching temperature, it effectively springs against the throw force of the spring snap-in disc (3) into its inverted position. The contacts are abruptly opened. The temperature will now fall. The bimetallic disc (4) will only snap back upon reaching a defined reset temperature and the contacts will be closed again. As the contact bearing pin (2) is appropriately dimensioned, an easy, circular rotation of the circle-shaped contact bridge (1) is enabled with every switch so that transfer resistances remain constantly below the minimum limit after many switch cycles and the long term stability is sustained even under high levels of stress.

Features:

Strong power density	Strong currents in small types of construction
Quick response sensitivity	Featured by small protector mass and the metal-housing
Excellent long term performance	Due to instantaneous switching, fine silver contacts, constant contact resistance and to electrically as well as mechanically unstrained bimetallic disc, reproducible switching temperature values
Very short bouncing times	< 1 ms
Instantaneous switching	With always constant contact pressure up to the nominal switching point, resulting in low contact stress
Temperature resistance	By use of high temperature resistant materials and components

	20	D		
	THERMIK	THERMIK		
	D	æ		
mm 0%				06 760 10 E2663
-	9.01	mm	6.3 mm	9.0 mm

d	h

Diameter d	9,0 mm
Installation height h	from 6,3 mm

Type: Normally closed; resets automatically; with connector cables; with epoxy; without insulation

Nominal switching temperature (NST) in 5 °C increments		70 °C - 200 °C	
Tolerance (standard)		±5 K	
Reverse switch temperature (RST) below NST (defined RST is possible at the customer's request)	UL VDE	-35 K ±15 K ≥ 35 °C	
Installation height	from 6,3 mm		
Diameter	9,0 mm		
Resistance to impregnation *	suitable		
Suitable for installation in protection class			
Pressure resistance to the switch housing *	600 N		
Standard connection	Lead wire 0,75 mm² / AWG18		
Available approvals (please state)	IEC; ENEC; VDE; UL; CSA; CQC		
Operational voltage range AC/DC	up until 500 V AC / 28 V DC		
Rated voltage AC	250 V (VDE) 277 V (UL)		
Rated current AC $\cos \varphi = 1.0/\text{cycles}$	10,0 A / 10.000		
Rated current AC cos φ = 0.6/cycles	6,3 A / 10.000		
Max. switching current AC $\cos \varphi = 1.0$ /cycles	25,0 A / 2.000		
Rated voltage DC		24 V	
Max. switching current DC/cycles		40,0 A / 10.000	
Total bounce time		< 1 ms	
Contact resistance (according to MIL-STD. R5757)	≤ 50 mΩ		

Current sensitivity characteristic at I_{nom}:

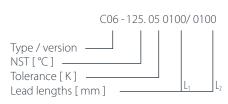

Vibration resistance at 10 ... 60 Hz

dependent of:

- Thermal coupling
- Application area
- Built-in conditions
- Outer influences
- Wiring length / wiring diameter

Ordering example:

More varieties of the type series 06:

- $\bullet\, SO6-with\, connector\, cables; with\, epoxy; insulation: Mylar ^{\bullet}-Nomex ^{\bullet}$
- $\verb|\cdot| L06-with connector cables; with epoxy; fully insulated in a screw on housing \\$
- P06 with connection pins; with epoxy; fully insulated in the attachment housing
- $\bullet \textit{V06}-\textit{with connector cables} \textit{ and double-insulated in the attachment housing } \\$
- $\bullet\,B06-with\,connector\,cables; with\,epoxy; fully\,insulated\,in\,a\,Ryton^{\otimes}\,cap$
- F06 with connector cables; with epoxy; fully insulated in a Nomex® cap
- C06HT with connector cables; silicone coated; without insulation • S06HT – with connector cables; silicone coated; insulation: PTFE
- $\bullet \textit{H06}-\textit{with connector cables; with epoxy; fully insulated in the attachment housing}\\$
